Criminal Information Management System

SpeedTrack, Inc.

“Without question, this is the most cost effective and efficient technology available. One of the best features is that SpeedTrack doesn’t require the replacement of existing systems or databases so there is no disruption to operations.”

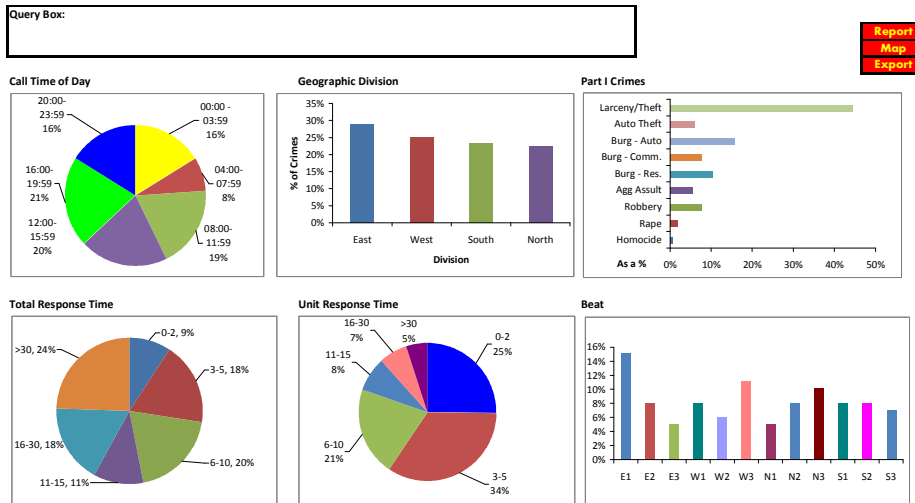

Joe Brann, Founding Director of COPS, U. S. Department of Justice

Criminal Information Management System (CRIMEs)

CRIMEs is an innovative analysis and investigative software application which links data systems together. Interactive dashboards are available for command staff to quickly and intuitively assess calls for service and incident information by geographic, call/incident type, time of day and response times.

Investigators, analysts and patrol officers have the ability to find associations using detailed and or partial information contained in their data (people, location, incident, vehicle, etc.) including searching all available electronic reports and free text fields.

- Gain greater awareness, control and accuracy of your data
- Be able to answer your own questions without IT help
- Create custom views for each level of user
- Quickly run comparative analytics on the entire range of information thru a single interface

Example of a Command Staff Dashboard

For a quick demo on how you can unlock the secrets buried in your data, give us a call or send an email to info@speedtrack.com
