**SpeedTrack, Inc.**

## **Employee Records Management Early Warning System**

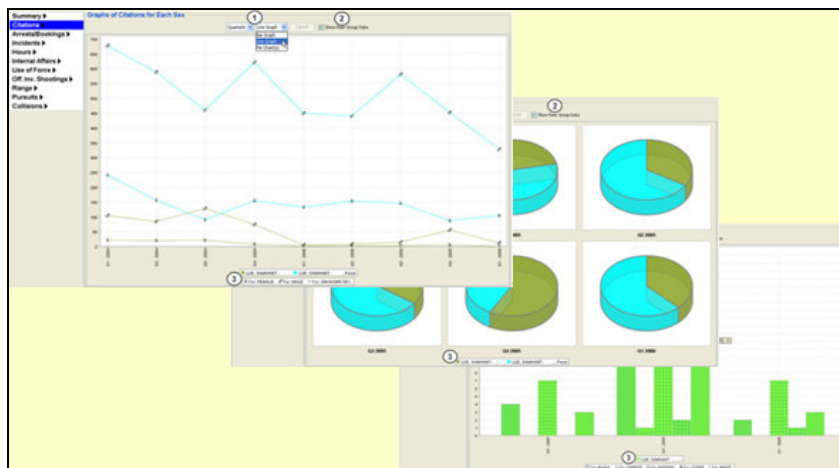

**“Without question, this is the most cost effective and efficient technology available. One of the best features is that SpeedTrack doesn’t require the replacement of existing systems or databases so there is no disruption to operations.”**

Joe Brann, Founding Director of COPS, U. S. Department of Justice

### **SpeedTrack’s Employee Records Management/Early Warning System (EWS)**

While other systems focus on IA complaints, *SpeedTrack* easily integrates data from multiple sources for a ‘360 view to each employee’s activity. “Using a broader range of indicators is more likely to identify officers whose behavior requires departmental intervention” (NIJ Brief on Early Warning Systems, July 2001).

- Has the flexibility to be deployed as an employee management system, or a full blown EWS with triggers.
- Easy to use and administer. Tailored to your needs and available data.
- Include: arrests, bookings, citations, internal affairs reports, use of force incidents, range scores, payroll, overtime, pursuits, collisions and more.
- Thresholds/triggers can be set for individuals who meet defined criteria.
- Individual data retrieval, peer and organization comparisons by group.
- Custom groupings of officers or civilians can be made on the fly.
- Data can be exported to Excel or other applications for additional analysis.
- Quickly and easily create charts and graphs on the fly!
